

F-Secure Anti-Virus Enterprise Suite

F-Secure® Anti-Virus™ Enterprise Suite offers everything large businesses and corporations need to protect the company network against viruses, spyware, Trojans, worms, spam, and network intrusions. It protects corporate workstations, laptops, file servers, MS Exchange mail servers, Citrix MetaFrame and gateways. Covering both Windows and Linux computers, this centrally-managed solution eliminates the cost of a multi-vendor security solution.

Protection for Laptops and Desktops

F-Secure Anti-Virus Enterprise Suite protects corporate laptops and desktops against viruses, spyware, hackers and network worms. Using centralized management, the network administrator can also control the use of networking applications, such as peer to peer software and network games.

- > F-Secure Anti-Virus™ for Workstations

Protection for File Services

F-Secure Anti-Virus Enterprise Suite ensures that users who connect to the corporate Windows or Linux file servers with infected machines do not spread viruses further into the network. For Linux servers the Suite provides an additional protective layer complete with integrated firewall to prevent attacks from the network.

- > F-Secure Anti-Virus™ for Citrix Servers

Protection for E-mail and Internet Gateways

F-Secure Anti-Virus Enterprise Suite safeguards corporate e-mail (SMTP) and web traffic (HTTP and FTP over HTTP) by removing malicious content. The Suite stops viruses entering not only from the Internet, but also between remote offices and from internal e-mail traffic. The additional F-Secure Spam Control component for F-Secure Internet Gatekeeper and F-Secure Anti-Virus for Microsoft Exchange filters annoying spam messages.

Key Features

End-to-end virus protection for laptops, desktops, file servers, e-mail servers and gateways.

Total protection against viruses, worms, spyware and Trojans attacking via e-mail, Web, floppy disks and CD-ROM, as well as against spam, hackers and malware on the Internet.

Integration with F-Secure Policy Manager™ for easy configuration, enforcement and monitoring of security policies at every tier of the corporate network from a single console.

Automatic daily virus and spyware definition database updates with minimal bandwidth use to ensure continuous up-to-date protection.

F-Secure's powerful virus scanning engines, firewall software and content filtering to ensure the network is proactively protected even against unknown threats.

F-Secure Data Security Lab working 24/7, which ensures short reaction times and a fast turnaround against new and emerging threats.

Comprehensive and cost-efficient solution that provides everything needed to secure the corporate network.

Proactive Protection against Unknown Threats

In addition to known viruses, the antivirus products recognize new, unknown threats based on advanced proactive protection. The integrated desktop firewall shields workstations from hackers and network worms, and prevents unauthorized access to workstations by constantly monitoring and filtering Internet traffic. The unique network quarantine functionality ensures the appropriate protection level of workstations and laptops connecting to the company network before granting them access.

Extensive Centralized Management

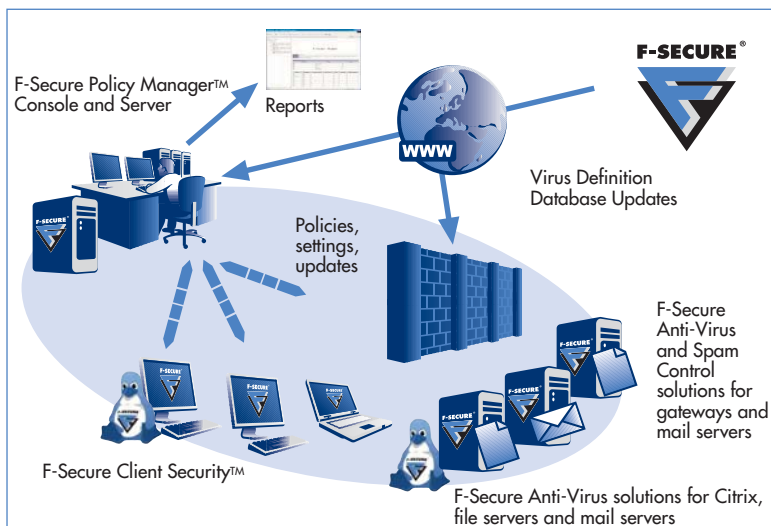

The solutions can be centrally installed, configured and updated from a single console using F-Secure Policy Manager that is included in the F-Secure Anti-Virus Enterprise Suite licenses. In addition, the administrator can easily monitor the network by generating extensive reports on the security status of the network.

Automatic Virus and Spyware Definition Updates

Automatic antivirus updates improve data security through added reliability and prompt delivery of critical definition files. The virus definition databases are updated automatically on a daily basis to ensure 100% effectiveness without administrator intervention.

F-Secure Data Security Lab

Antivirus products are only as good as the research and dedication behind them. That is why F-Secure Anti-Virus is consistently ranked at the top when compared with competing products. A team of researchers working 24 hours a day ensures that the reaction time on emerging threats is immediate and that a turnaround can be distributed fast. In fact, F-Secure is one of the few companies that releases tested virus definition updates daily to make sure its customers receive the highest quality service and protection.

Platforms

F-Secure Policy Manager, F-Secure Policy Manager Console, F-Secure Policy Manager Server, F-Secure Policy Manager Web Reporting, F-Secure Policy Manager Proxy
Windows Server 2000/2003 (XP, only console)

F-Secure Policy Manager for Linux
Red Hat Enterprise Linux 3, 4
SuSE Linux 9, 10
SuSe Linux Enterprise Server 9
Debian GNU Linux 3.1

F-Secure Internet Gatekeeper
Windows 2000/2003 Server
Any firewall and SMTP-based e-mail server

F-Secure Internet Gatekeeper for Linux
RedHat 6.0 or later (including 7.x, 8.x and 9.x)
RedHat Enterprise Linux (AS (Advanced Server)/ES/
WS 2.1/3.0)
SuSE 6.2 or later

F-Secure Anti-Virus for Microsoft Exchange
Windows 2000/2003 Server
Exchange 2000/2003 Server
Exchange 5.5 SP4 or later

F-Secure Anti-Virus for MIMESweeper
Windows 2000/2003 Server
CS MAILsweeper for SMTP 4.3, 5.0
CS MIMESweeper for Web 5.0, 5.10

F-Secure Anti-Virus for Citrix Servers
Windows 2000/2003 Server
Citrix MetaFrame Presentation Server 3.0/4.0

F-Secure Client Security 7.x
Windows 2000/XP/Vista*

F-Secure Anti-Virus Client Security 6.x
Windows 2000/XP

F-Secure Anti-Virus Client Security 5.x
Windows 98/NT/ME/2000/XP

F-Secure Linux Client Security/F-Secure Linux Server Security
Novell Linux Desktop 9
SUSE Linux 9.0, 9.1, 9.2, 9.3, 10.1
SUSE Linux Enterprise Server 8, 9, 10
SUSE Linux Enterprise Desktop 10
Red Hat Enterprise Linux 3, 4
Red Hat Enterprise Linux 2.1 AS
Mandrake 10.1
Debian 3.1
Ubuntu 5.10 (Breezy)

F-Secure Anti-Virus for Workstations
Windows 95/98/NT/2000/ME/XP

F-Secure Anti-Virus for Windows Servers
Windows 2000/2003 Server
