

Symantec™ Mail Security for Microsoft® Exchange

An integrated, high-performance security solution that protects against viruses, spam, and security risks while enforcing company policies

Overview

Symantec Mail Security for Microsoft Exchange¹ provides high-performance, integrated mail protection against virus threats, spam, and security risks, while also enforcing company policies on Microsoft Exchange Server 2000, 2003, and 2007. A Symantec Premium AntiSpam™ subscription can be activated by purchasing a license key to provide best-of-breed spam prevention with a spam catch rate of more than 97 percent, with 1 in 1 million critical false positives²—without additional ongoing administration after initial setup.

Key benefits

- **Industry-leading antivirus** defends against new and known viruses and security risks.
 - Rapid Release definitions are updated approximately every 30 minutes to ensure protection against emerging threats.
 - Is backed by Symantec Security Response, the world's leading antivirus and Internet security research organization.
- **Industry-leading antispam** with a spam catch rate of more than 97 percent, with 1 in 1 million critical false positives.²

- **Integrated content filtering**³ for policy enforcement, blocking inappropriate content and restricting confidential information from being sent.
 - Flexible user- and group-based policy enforcement rules allow creation of targeted rules to prevent inappropriate communications.
 - Advanced policy rules filter inappropriate content within most attachment file formats, and block files based on true file type (not just file extension).
 - **Centralized management** enables administrators to update settings of individual servers and groups of servers remotely.
 - **Security risk management** features help block spyware and adware, and mitigate existing security risks.
 - **Intuitive user interface** provides a consistent, high-performance administration experience.
-

New features in this release

- **Faster scanning**—Performance is significantly improved in the latest version for faster real-time and mailbox scans and reduced load on the Exchange server.
- **Consolidated reports**—Summary reports can aggregate report data from all Exchange servers within a group for a single report on all activity within the Exchange environment.
- **Exchange 2007 support**

¹ Also known as Symantec Information Foundation Mail Security for Microsoft Exchange.

² InfoWorld Product Review, October 2006; GCN Review, June 2006.

³ Support for 2000 and 2003 only.
